

REDLINE SeMS

ABOUT THE PRODUCT

Redline SeMS is a digital Security Management System based on a core enterprise software framework with tailored functional area add-ins. It's fully digitised, supporting electronic inputs where available, but is also able to support existing paper processes, with manual and/or spreadsheet inputs, if required. It uses a flexible web-based architecture which provides a secure data management. It is available as a cloud hosted solution, to support global access, or alternative hosting options are available to allow for different IT infrastructure and local data protection regulations. It can be used on a wide variety of platforms, and supports multiple operating systems (including iOS) and browsers.

REDLINE SeMS CAN BE USED AS:

- An aviation security management system
- A safety & security management system
- A secure data reporting and management system
- A policing system
- A data analytics and relationship management system
- A secure repository system for restricted information
