

CNI SECURITY

ABOUT THE SERVICE

The most significant threat facing a nation comes from international terrorism and its stated ambitions to mount 'high impact' attacks that combine mass casualties with substantial disruption to key services and infrastructure such as Chemicals, Civil Nuclear, Communications, Defence, Emergency Services, Energy, Finance, Food, Government, Health, Space, Transport and Water. This is a threat that is different in scale and intent to any that any nation has faced before and continues to become increasingly more complex.

We understand the importance of maintaining modern day security throughout the 13 sectors of a national infrastructure. Redline's unique knowledge and skillsets combined with its Security Management Systems (SeMS) ensure those facilities, systems, sites and networks necessary for the functioning of the country and the delivery of the essential services upon which daily life depends are as secure as they can be in and continue to be developed in line with the ever-changing threat.
