

# COMPLIANCE MONITORING & MENTORING

## ABOUT THE SERVICE

Compliance monitoring is the observation and analysis of security tasks, routines, procedures and adherence to standards and policies implemented to mitigate business risks.

Adequate compliance monitoring is only effectively achieved by using correctly trained and experienced staff that can recognize not only the occurrence of a non-compliance but can 'correctly' identify the singular and/or accumulative (root) causal factors. Too often the symptoms of non-compliance are seemingly corrected however the underlying cause remains prevalent and reemergence occurs within days (often hours).

Correct identification of non-compliances and timely intervention are key to the progressive improvement of compliance and the eradication of inconsistencies in the security workplace.

**Redline** compliance monitoring and mentoring ensures both the timely identification of non-compliance's and all casual factors as well as appropriate intervention to ensure prevention.
