

HOLISTIC TRAINING SOLUTIONS

ABOUT THE SERVICE

As one of only 32 ICAO Aviation Security Training Centres in the world, Redline is well placed to provide a holistic training service across the full span of aviation security disciplines. We have the in-house knowledge and expertise necessary to develop and deliver off-the-shelf and bespoke training solutions that align with International and National legislation.

Recent projects have spanned developing training curriculums, courseware and instructor guides for courses that align with ICAO, EU and TSA regulation. Furthermore, we have produced the necessary underpinning documentation to enshrine the associated syllabi/objectives within National Civil Aviation Security Training Programme.

Our holistic training solutions start with a robust Training Needs Analysis which determines the required output standards to be achieved by the learners. Our solutions are designed to build knowledge, confidence and competence, drawing upon our expertise in the delivery of traditional instructor led training, mentoring, elearning and cloud-based software; e.g. Redline TIRT, to provide a blended solution to get your people to the required standard.
